

Stations

GGP Consult have worked on a wide range of station projects including platform extensions, station refurbishments and lighting designs. Clients include various train operating companies and major rail infrastructure contractors.

With a varied portfolio of station related works, GGP are well positioned to offer our clients a number of key services and support from budget costs, feasibility studies and specification production to tender assistance and design depending on the roles required.

Our Architects and engineering professionals are well equipped to provide support and bespoke engineering solutions tailored to suit your project schedule and environment. Where required, we can carry out all planning or landlord's consent applications.

Previous projects have included prestigious station facade remodelling and other architectural features including new footbridges, heavy pedestrian traffic area renovations, external works/landscaping and general station fixtures.

On recent platform extension schemes, we have been responsible, as principal designers for a multitude of design disciplines (as listed opposite), with our sub contract design partners, in addition to the full civils design and platform gauging works.

Stations

- New Buildings & Extensions
