

NETWORK RAIL ON-GOING FRAMEWORK

CLIENT – Network Rail
CONTRACTOR – AMCO
CONTRACT VALUE – up to £50k repair remits
PROJECT DATE – 2014 – Ongoing

GGP have been instructed by AMCO on behalf of Network Rail. As part of a framework GGP carry out various design remits which are required on numerous assets that have been recorded with defects on LNW infrastructure.

Often these defects are at height above busy carriage ways. With more traditional survey equipment in the past, road closures and rail possessions would have been required in order to examine the structure.

GGP provide our clients efficiencies in surveying and planning by conducting 3D point cloud surveys in conjunction with the initial engineering assessment. This often negates the requirement for high level access.

The surveys also provide the client with high definition photographs of the site which are stored on a server accessible to the client.

Access to this data often reduces the requirement to re-visit site therefore saving the client time and expense.

These savings are then passed on to the client ensuring a cost effective, through project from start to finish.
