

MOMBASA/ELDORET GASOIL TERMINALS, KENYA

CLIENT – Milio
CONTRACTOR – Civicon
CONTRACT VALUE – \$15M
PROJECT DATE – 2013

GGP Consult provided Civil and Structural Engineering Services to Milio for the Mombasa to Eldoret Gasoil Rail Link Project.

Eldoret is in the heart of the Rift Valley in Kenya. Agriculture provides the main export for this region. The local Gasoil supply is provided by a single pipeline which is at capacity. The area is filled with corruption associated with fuel poverty.

Milio planned to provide a new gasoil supply via an existing rail link. The gasoil was to be transported in ISO carts which were top loaded from a Gasoil terminal in Mombasa and received by an unloading, storage and distribution facility in Eldoret.

GGP consult surveyed the existing Mombasa terminal and the proposed location of the new Eldoret terminal. GGP then carried out a geotechnical investigation, performed a select study, provided general arrangement drawings and completed a FEED design.

Milio has placed the project on hold prior to Detailed Design, in order to negotiate terms with the Kenya Rail Authority.
